Software Engineer | Backend, Distributed Systems & AI

EXPERIENCE

Software Engineer (SDE 1)

Oct 2024 – Jul 2025

Amazon

Irvine, CA

- Designed and built a Scala/SQL ETL pipeline supporting international markets (Japan, Spain, Italy) by integrating promotion rules to exclude eligible items from algorithmic pricing, improving pricing correctness and consistency.
- Developed a serverless monitoring system (“Smart Alarm”) using AWS Lambda to detect inventory anomalies across 500+ stores, enabling faster issue resolution by Instock Managers.
- Led cross-region AWS migration (Ireland to Spain) for a critical data pipeline, supporting company-wide infrastructure cost reduction.
- Responded to on-call production incidents, maintaining reliability of pricing and AI infrastructure.
- Tools/Languages: *Scala, SQL, Java, TypeScript, AWS (Lambda, S3, Glue, Athena), Python, Git*

Software Engineer Intern

Jun 2023 – Sep 2023

Instructure

Salt Lake City, UT

- Revamped a nightly AWS ETL pipeline by redesigning data processing workflows, improving processing efficiency.
- Achieved a 70% performance improvement by centralizing aggregation logic in PostgreSQL and eliminating redundant data processing.
- Built monitoring and alerting for ETL failures using AWS CloudWatch, reducing debugging time and improving pipeline reliability.
- Tools/Languages: *Ruby, Ruby on Rails, PostgreSQL, SQL, AWS (Lambda, S3, CloudWatch), GraphQL, Git*

Software Engineer Intern

Jun 2022 – Sep 2022

Foodware

Berkeley, CA

- Built an automated email delivery service from scratch using Python and AWS Lambda/SES, improving delivery reliability and operational efficiency.
- Added Pytest-based automated test coverage for production email workflows, improving reliability and reducing regression risk.
- Automated invoice generation and delivery, resulting in a predicted 30% improvement in on-time deliveries.
- Tools/Languages: *Python, AWS (Lambda, S3, SES), Pytest, Jinja, Git*

EDUCATION

Georgia Institute of Technology

Atlanta, GA

M.S. Computer Science (Online, In Progress)

Expected Dec 2027

- Selected Coursework: *Graduate Operating Systems (Distributed Systems), Database Systems Concepts and Design, Artificial Intelligence*

University of California, Davis

Davis, CA

B.S. Computer Science

Jun 2024

- Selected Coursework: *Operating Systems, Machine Learning*

PROJECTS

Distributed File System

San Jose, CA

Graduate Operating Systems (Distributed Systems)

Jul 2026

- Implemented a distributed file system in C++ using gRPC and Protocol Buffers for client-server communication.
- Designed gRPC upload and download RPCs supporting both binary and text file transfer.
- Built a weakly consistent client cache synchronization protocol to maintain file consistency across multiple clients.
- Developed concurrent server-side request handling and synchronization primitives for reliable distributed file access.

TECHNICAL SKILLS

Languages: Python, Java, C++, Ruby, Scala, SQL, TypeScript

Frameworks: Ruby on Rails, FastAPI, Node.js, Pytest, RSpec

Developer Tools & Cloud: Git, Docker, AWS (Lambda, S3, Glue, Athena, SES)

Libraries: NumPy, Pandas, Matplotlib, Scikit-learn, TensorFlow
